```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The cDNA library to be analyzed within the framework of this project was created using a Botrytis cinerea strain which was grown under conditions of nitrogen deprivation, which is the normal situation for B. cinerea during its development on its host plant. The library was produced in an oriented direction, in the pBSII

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        XFFFX8X5555555555555555555555555555555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC The present invention describes a method for monitoring differential CC expression of genes in a first filamentous fungal (FF) cell relative to CC expression of the same genes in one or more second filamentous fungal CC cells. The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the CC same genes in one or more second filamentous fungal cells. Monitoring CC the global expression of genes from FF cells allows the production CC potential of the microorganisms to be improved. New genes may be CC discovered, possible functions of unknown open reading frames can be CC discovered, possible functions of unknown open reading frames can be CC discovered. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore CC morphogenesis, recombination, metabolic or catabolic pathway
CC engineering. Using ESTs provides several advantages over genomic or caracy equals one gene or open reading frame, and organisation of the CC microarrays based on function of the gene products to facilitate analysis of the results. AAF01478 to AAF11247 represents ESTs from Aspergillus oryzae; and CC all engineering. AAF11854 to AAF11878 represents ESTs from Trichoderma reesei, which are

                                                                                                                                                                                         Sequence 1731 BP;
                                                                                                                                                                                                                                                   The present invention relates to a new microbe of Acinetobacter or Burkholderis genus producing aldonic acid and oxidising specifically the hemiacetal hydroxy group of a saccharide having said hydroxy group.

Aldonic acid is used as a mineral reinforcing agent. The present sequence and the present sequence are allowed to the present sequence.

The method is used for early diagnosis, and monitoring, of aspergillosis, particularly invasive infections in hematological-oncological patients with long-term suppression of the immune system. Unlike the known method using overlapping primers, this process provides efficient and reliable detection of Aspergillus in clinical situations. It is specific for Aspergillus (it detects the species terreus, niger, versicolor, clavatus, other genera).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A probe (AAQ73433) or its complement (AAQ73436) and corresponding RNA sequences (AAQ73437 and AAQ86436) used for the specific detection of all strains of Histoplasma capsulatum (H.C.). The probes are manufactured complementary to the H.C. 18s rRNA or rDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 18S rRNA. The probe is specific for H.C. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Nucleic acid hybridisation of the specific probe is enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.C. from samples e.g. body

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for monitoring differential CC expression of genes in a first filamentous fungal (FF) cell relative to cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTS care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the CC same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be CC identified and gene copy number variation and stability can be cC identified and gene copy number variation and stability can be cC monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore cc morphogenesis, recombination, metabolic or catabolic pathway cc engineering. Using ESTs provides several advantages over genomic or caray equals one gene or open reading frame, and organisation of the cmirroarrays based on function of the gene products to facilitate canalysis of the results. AAF07478 to AAF11247 represents ESTs from Aspergillus or canalysis of the results. AAF07478 to AAF11247 represents ESTs from Aspergillus or canalysis of the canalysis represents ESTs from Trichoderma reesel, which are cc all specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

CC expression of genes in a first flamentous fungal (FF) cell relative to cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC are used in the methods for monitoring differential expression of genes in one or more second filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring CC the global expression of genes from FF cells allows the production of genes from FF cells allows the production of genes from FF cells allows the production of genetatial of the microorganisms to be improved. New genes may be considered, possible functions of unknown open reading frames can be discovered, possible functions of unknown open reading frames can be considered, and gene copy number variation and stability can be morphogenesis, recombination, metabolic at but how FF cells adapt to changes in culture conditions, environmental stress, spore compineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate can be spot on function of the gene products are from the first from Aspergillus or parallals and represents ESTs from Aspergillus oryzae; and can array equals one gene or open reading frame, and organisation of the gene products of facilitate and stream venenatum; AAF14878 represents ESTs from Aspergillus oryzae; and can array equals or a spot of the search and stream are seal, which are constant and the presents ESTs from Aspergillus oryzae; and can all specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 86; Page 1589; 3161pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a new microbe of Acinetobacter or Burkholderis genus producing aldonic acid and oxidising specifically hemiacetal hydroxy group of a saccharide having said hydroxy group. Aldonic acid is used as a mineral reinforcing agent. The present seques used to illustrate the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a genomic DNA sequence containing the 18s rRNA gene, internal transcribed spacer regions 1 and 2 (ITS1, ITS2) and 5.8s rRNA sequences from a mutant strain of Gibberella fukikoroi (LTB-1027) of the invention. This region of DNA is highly variable and can be used for species and strain differentiation. The LTB-1027 mutant produces a mixture of gibberellins which is at least 70 % GA_4 and GA_7. Gibberellins GA_4 and GA_7 promote flowering and fruit cell elongation, and are used by growers of apples, pears and grapes to produce larger fruits and earlier harvests. The mixture of GA_3, GA_4 and GA_7 achieved using the method of this invention should be particularly useful in the apple industry where GA_4 has been found more effective in russet control and in promoting fruit set. This method produces GA_4 and GA_7 in much higher titers than prior art methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fujikuroi results in high titers of GA4 and flowering and fruit growth in the fruit grow

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAV61668 standard;
                          This DNA sequence encodes a fragment of a Fusarium oxysporum f.sp. fragaria 185 rRNA gene which is used in a method for the detection and identification of a fungus of Fusarium genus. The process can used to detect or identify microbes rapidly and exactly.
                                                                                                                                                                                                                                                                                        08-SEP-1998

                                            the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of genes CC same genes in one or more second filamentous fungal cells. Monitoring CC the global expression of genes from FF cells allows the production CC potential of the microorganisms to be improved. New genes may be CC discovered, possible functions of unknown open reading frames can be CC identified and gene copy number variation and stability can be CC monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore CC morphogenesis, recombination, metabolic or catabolic pathway CC engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an CC carray equals one gene or open reading frame, and organisation of the CC microarrays based on function of the gene products to facilitate analysis of the results. AAPO1478 to AAF11853 represents ESTs from Aspergillus organisation of catafiles to facilitate analysis of the results. AAPO1478 to AAF11853 represents ESTs from Aspergillus organisation of catafiles to AAF11879 to AAF11879 from Trichoderma reesei, which are CC all specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 87; Page 1718; 3161pp; English.

d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       June 12, 2003, 01:18:34; Search time 39.335 Seconds
